Professional Experience

Focus School Software | JavaScript Engineer

January 2024 - January 2026

- Developed and maintained automated test scripts using JavaScript and WebdriverIO to reduce regression defects and improve software quality across web and mobile platforms.
- Designed and implemented data-driven testing frameworks and dynamic test data solutions to increase test coverage, efficiency, and reliability.
- Leveraged AI-assisted development tools, including ChatGPT, GitHub Copilot, and Grok, to accelerate test development, troubleshoot failures, and improve debugging efficiency across automated test suites.

DigitalCrafts | Teaching Assistant

August 2022 - January 2024

- Guided students through full-stack development concepts and daily coding challenges using technologies including JavaScript, React, Node.js, SQL, and PostgreSQL.
- Debugged student code across multiple languages and frameworks, providing clear explanations and practical solutions to reinforce core programming concepts.
- Delivered personalized technical support and mentorship, improving student comprehension and problem-solving skills in real time.

Interactive Search Marketing | Data Analysis & Technical SEO

February 2015 - January 2019

- Executed technical SEO strategies such as keyword research, metadata optimization, alt tag updates and NAP consistency improvements to increase search visibility.
- Performed technical site audits to identify and resolve issues such as broken links, crawl errors, and performance bottlenecks.
- Developed monthly performance reports using Google Analytics, translating traffic and engagement data into actionable insights.

The Fastest Dog | Technical Support & Operations Specialist

January 2013 - December 2014

- Delivered end-to-end technical support using Remote Desktop to diagnose and resolve software issues, malware, and system performance problems.
- Performed computer diagnostics, repairs, and system optimization while educating customers on software and hardware usage.
- Managed daily business operations independently, including customer transactions, inventory management, and staff training.

Recent Projects

Lockbox | [GitHub](#) | [Live Site](#)

- Developed Lockbox Password Manager as the solo Full-Stack Developer, creating a secure platform for users to store and manage their passwords efficiently.
- Employed a tech stack that included Node.js, Express.js, PostgreSQL, bcrypt, cors, and jsonwebtoken (JWT) for robust server-side architecture, ensuring secure data management and user authentication.
- Implemented React, React Router, Tailwind, Bootstrap, React Icons, and Vite for the client-side, focusing on delivering a user-friendly interface and seamless navigation experience.
- Implemented secure authentication, encrypted password storage, and real-time data synchronization to enhance usability and security.

City of Refuge | [GitHub](#) | [Deployed Server](#)

- Organized and led a team of 12 for the City of Refuge hackathon, employing Agile methodologies to streamline the event's operations and maximize productivity.
- Ensured the high-quality and secure functioning of the data by meticulously overseeing the deployment of the server, guaranteeing its seamless operation and robust performance without any setbacks.
- Addressed team inquiries, provided comprehensive debugging support, and assigned specific tasks to team members, ensuring a cohesive and efficient workflow throughout the hackathon.

Battleship | [GitHub](#) | [Live Site](#)

- Developed a modern recreation of the classic board game Battleship, offering users an engaging and challenging gameplay experience through a user-friendly interface.
- Incorporated user registration and login functionalities, allowing users to save their progress and track their game history within the application.
- Built the application using React, Redux, and Axios on the client-side, with support from Node.js, Express, and PostgreSQL on the server-side.
- Implemented secure user authentication using Passport.js and jwt-simple to ensure protected access for users.

Education

Southern New Hampshire University | M.S. in IT with a concentration in Software Application Development

DigitalCrafts - Full-Stack Software Development Program

Oglethorpe University | B.A.

Skills

Languages & Frameworks: JavaScript, Node.js, React, SQL, PostgreSQL

Testing & Automation: WebdriverIO, Jest, Mocha, Chai, End-to-End Testing, Test Automation

Frontend & Styling: HTML, CSS, Tailwind, Sass

Tools & Platforms: Git, Subversion (SVN), Postman, Bash, Jira, Visual Studio Code, WP Engine

AI-Assisted Development: ChatGPT, GitHub Copilot, Grok, Claude

Additional Experience: Python, PHP, TypeScript, GraphQL, Sequelize, Redux
